

# SharpLynx

## Cloud Integration

---

Cloud storage makes it possible to access your files anytime from virtually anywhere on almost any device. With plenty of free cloud storage services to choose from, consider how the new cloud integration features in SharpLynx can benefit your business ...

---

### Reports

Your favourite reports delivered automatically to your cloud drive or inbox

Would you like to have your favourite SharpLynx reports automatically delivered to your cloud drive or inbox? Now you can! Configure and save your favourite reports in SharpLynx and then add them to a scheduled job. You can even set it up so that different reports are emailed to different people within your organisation.

Need a specific report sent immediately? No problem. Simply choose the report, customise it to suit and then send it to your cloud drive or email it without even leaving the reports screen.

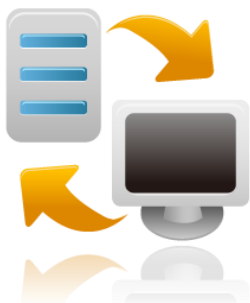

Consider a couple of examples:

- Open your cloud drive on your tablet PC Friday evening and view your weekly sales reports
- Have a Reorder Report for your main supplier emailed to your purchasing officer every Monday morning

The possibilities are endless ...

---

### Backup

Keeping your valuable data safe and secure

Your data is valuable. Therefore, having a regular backup routine is essential. Cloud storage services use a local folder on your computer as the transfer point to your cloud drive. Simply select your local cloud folder when backing up your SharpLynx data file and your backup file will then be automatically copied to your cloud drive. Thus you can have both the convenience of local backup files and the security of backup files in the cloud.
