LYNXSOFT.NET
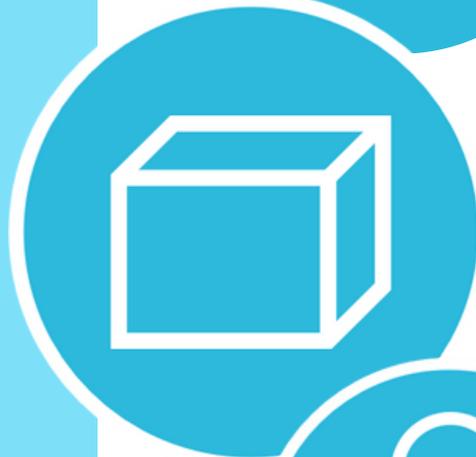

DON'T GET LEFT *behind*
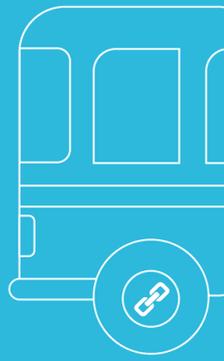

WHY UPGRADE YOUR SOFTWARE?

1. IMPROVEMENTS AND NEW FEATURES

Software development is an ongoing process. Our latest versions of software are the result of over 10 years of constant development. We take requests and suggestions from our resellers and end-users. We look at current market trends and future industry directions. We then take all this information and use it to create a range of new features and to improve our current ones. This results in a product that is easier to use and better suited to the needs of businesses. By upgrading your software, you are able to take advantage of these improvements and new features.

2. COMPATIBILITY

Older versions of software aren't always compatible with newer POS terminal models and firmware versions, neither are they always compatible with the latest operating systems.

In contrast, the latest version of Uniwell Lynx can be installed on Windows 10 computers and can connect with the newest Uniwell POS terminals. By upgrading your software you can 'future-proof' your POS system.

3. SUPPORT

Another reason to consider upgrading is the ability to receive better support. Every Uniwell Lynx version has a support life-cycle that starts when it is initially released and ends when it is no longer supported.

Also, since software features change and improve with every version, it can become difficult for support providers to be able to give the best and quickest advice when the customer is using an old version of software.

Additionally, online support provisions are constantly being developed for the latest software version, such as our support tutorials. They are designed to help you in using your software and getting the most out of it.
