

Topic: **USING THE EXTRACT PROGRAM FUNCTION**

FAQ: What does Extract Program do?

This function retrieves program information from your POS terminal and adds the records to the Uniwell Lynx Lite database. The following points should be noted:

- *PLUs retrieved will create items in your database with Item Codes that match the PLU number*
- *Barcodes retrieved will also create an item with the Barcode number as the Item Code*
 - **Note:** *PLUs and Barcodes are separate entities in the POS terminal, so you will need to modify your data manually if an item has more than one code at the POS terminal*

	Code	Description	Status
<input checked="" type="checkbox"/>	1	HX-4000	

Program Selection

- Groups
- PLUs
- Barcodes
- Condiment Groups
- Link PLU Groups
- Cooking Instructions
- AX/HX Screen Layouts
- Clerks

Select All Clear All

Options

New Items Only

Ok Cancel

FAQ: What affect will Extract Data have on my existing data?

*Existing data, including Groups and Items, will be overwritten by the Extract Program procedure **unless** the **New Items Only** option is selected.*

FAQ: So is the best way to add new items to my system to add them in the POS terminal and then perform an Extract Program?

No, the best procedure is to create the Item in the software and then perform a Send Program to transmit that information to your POS terminal.
